

AVOID COMMUNICATIONS HEADACHES

TALK TO A SPECIALIST

The prospect of implementing Broadband for the first time, or changing suppliers if you need to, can be stressful. As a company that's focused on supporting smaller businesses, we know that you can't afford to waste valuable time dealing with multiple suppliers or chasing up your provider when there's a problem.

You need to be certain that the supplier you choose has the technical expertise you need and that on-site support is always available - instead of waiting on a 'Helpline' that's anything but helpful . . .

With this in mind, we've designed our Broadband service to give you exactly what you need.

Total focus on smaller businesses

Friendly, helpful on-site engineers whenever you need them.

Fully managed domain transfer

Optional ISDN2e back up and VPN configuration plus static IP addresses included.

Single point of contact for problem resolution

Free of charge – including line faults.

ADSL TotalCare support with enhanced response times from BT

And a single bill which includes the ADSL, the bearer line and the host line.

If this ticks all the right boxes for your business – call Spitfire now on **0800 652 5952** or email **broadband@spitfire.co.uk**
